## PERMANENT AND INDUCED MAGNETISM

## Q1.

Figure 1 shows two iron nails hanging from a bar magnet.
The iron nails which were unmagnetised are now magnetised.
Figure 1

(a) Complete the sentence.

Use a word from the box.

| forced | induced | permanent |
| :---: | :---: | :---: |

The iron nails have become $\qquad$ magnets.
(b) Each of the three metal bars in Figure $\mathbf{2}$ is either a bar magnet or a piece of unmagnetised iron.

The forces that act between the bars when different ends are placed close together are shown by the arrows.

Figure 2

Which one of the metal bars is a piece of unmagnetised iron?

Tick one box.
Bar 1

Bar 2

Bar 3 $\square$

Give the reason for your answer.
$\qquad$
$\qquad$
(c) A student investigated the strength of different fridge magnets by putting small sheets of paper between each magnet and the fridge door.

The student measured the maximum number of sheets of paper that each magnet was able to hold in place.

Why was it important that each small sheet of paper had the same thickness?
$\qquad$
$\qquad$
$\qquad$
(d) Before starting the investigation the student wrote the following hypothesis:
'The bigger the area of a fridge magnet the stronger the magnet will be.'
The student's results are given in the table below.

| Fridge <br> magnet | Area of <br> magnet <br> in $\mathbf{~ m m ~}^{2}$ | Number of <br> sheets of <br> paper held |
| :--- | :---: | :---: |
| A | 40 | 20 |
| B | 110 | 16 |
| C | 250 | 6 |
| D | 340 | 8 |
| E | 1350 | 4 |

Give one reason why the results from the investigation do not support the student's hypothesis.
$\qquad$
$\qquad$

Q2.
Waves may be either longitudinal or transverse.
(a) Describe the difference between a longitudinal and a transverse wave.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) Describe one piece of evidence that shows when a sound wave travels through the air it is the wave and not the air itself that travels.
$\qquad$
$\qquad$
$\qquad$
(c) The figure below shows the parts of a moving-coil loudspeaker.

A coil of wire is positioned in the gap between the north and south poles of the cylindrical magnet.

Explain how the loudspeaker converts current in an electrical circuit to a sound wave.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(Total 9 marks)

## Q3.

Figure 1 shows a piece of apparatus called a current balance.
Figure 1

When the switch is closed, the part of the wire labelled $\mathbf{X}$ experiences a force and moves downwards.
(a) What is the name of the effect that causes the wire $\mathbf{X}$ to move downwards?
$\qquad$
(b) Suggest one change you could make to the apparatus in Figure 1 that would increase the size of the force that wire $\mathbf{X}$ experiences.
$\qquad$
(c) Figure 2 shows how a small weight placed on the insulating bar makes the wire $\mathbf{X}$ go back and balance in its original position.

## Figure 2

The wire $\mathbf{X}$ is 5 cm long and carries a current of 1.5 A .
The small weight causes a clockwise moment of $4.8 \times 10^{-4} \mathrm{Nm}$.
Calculate the magnetic flux density where the wire $\mathbf{X}$ is positioned

Give the unit.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
Magnetic flux density $=$ $\qquad$ Unit $\qquad$

Q4.
(a) Electromagnets are often used at recycling centres to separate some types of metals from other materials.

Give one reason why an electromagnet would be used rather than a permanent magnet.
$\qquad$
$\qquad$
(b) In this question you will gain marks for using good English, organising information clearly and using scientific words correctly.

Some students want to build an electromagnet.
The students have the equipment shown below.

Describe how the students could build an electromagnet. Include in your answer how the students should vary and test the strength of their electromagnet.
(Total 7 marks)

## Q5.

Figure 1 shows a magnet moving into a coil of wire. This movement causes a reading on the voltmeter.

Figure 1

(a) Use the correct word from the box to complete the sentence.

| generated | induced | produced |
| :---: | :---: | :---: |

Moving the magnet into the coil of wire causes a reading on the voltmeter because a potential difference is $\qquad$ across the ends of the wire.
(b) A student investigated how the number of turns on the coil of wire affects the maximum voltmeter reading. The student changed the number of turns on the coil of wire, then moved the magnet into the coil. The student recorded the maximum voltmeter reading.

To obtain valid data, suggest two variables that the student should control in this investigation.

1. $\qquad$
$\qquad$
2. $\qquad$
$\qquad$
(c) The student's results are shown in Figure 2.

Figure 2

(i) One of the results is anomalous.

Suggest a reason for the anomalous result.
(ii) Draw a line of best fit on Figure 2.
(d) A data-logger can automatically record and store data.

It may have been better for the student to have used a data-logger in his investigation rather than a voltmeter.

Suggest one reason why.

Q6.
(a) Diagram 1 shows a magnetic closure box when open and shut. It is a box that stays shut, when it is closed, due to the force between two small magnets.

These boxes are often used for jewellery.

## Diagram 1

Diagram 2 shows the two magnets. The poles of the magnets are on the longer faces.

## Diagram 2

(i) Draw, on Diagram 2, the magnetic field pattern between the two facing poles.
(ii) The magnets in the magnetic closure box must not have two North poles facing each other.

Explain why.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) A student is investigating how the force of attraction between two bar magnets depends on their separation.

She uses the apparatus shown in Diagram 3.

## Diagram 3

She uses the following procedure:

- ensures that the newtonmeter does not have a zero error
- holds one of the magnets
- puts sheets of paper on top of the magnet
- places the other magnet, with the newtonmeter magnetically attached, close to the first magnet
- pulls the magnets apart
- notes the reading on the newtonmeter as the magnets separate
- repeats with different numbers of sheets of paper between the magnets.

The results are shown in the table.

| Number of sheets <br> of paper between the <br> magnets | 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 120 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Newtonmeter reading <br> as the magnets <br> separate | 3.1 | 2.6 | 2.1 | 1.5 | 1.1 | 1.1 | 1.1 | 1.1 | 1.1 |

(i) Describe the pattern of her results.
$\qquad$
$\qquad$
(ii) No matter how many sheets of paper the student puts between the magnets, the force shown on the newtonmeter never reaches zero.

Why?
$\qquad$
$\qquad$
(iii) The student is unable to experiment with fewer than 10 sheets of paper without glueing the magnet to the newtonmeter.

Suggest why.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(iv) Suggest three improvements to the procedure that would allow the student to gain more accurate results.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(v) The thickness of one sheet of paper is 0.1 mm .

What is the separation of the magnets when the force required to separate them is 2.1 N ?
$\qquad$
$\qquad$
$\qquad$
Separation of magnets $=$ $\qquad$ mm

## Q7.

A student is investigating the strength of electromagnets.
Figure 1 shows three electromagnets.
The student hung a line of paper clips from each electromagnet.
Figure 1

No more paper clips can be hung from the bottom of each line of paper clips.
(a) (i) Complete the conclusion that the student should make from this investigation.

Increasing the number of turns of wire wrapped around the nail will
$\qquad$ the strength of the electromagnet.
(ii) Which two pairs of electromagnets should be compared to make this conclusion?

Pair 1: Electromagnets $\qquad$ and $\qquad$
Pair 2: Electromagnets $\qquad$ and $\qquad$
(iii) Suggest two variables that the student should control in this investigation.

1. $\qquad$
2. $\qquad$
(b) The cell in electromagnet $\mathbf{A}$ is swapped around to make the current flow in the opposite direction. This is shown in Figure 2.

Figure 2

What is the maximum number of paper clips that can now be hung in a line from this electromagnet?

Draw a ring around the correct answer.
fewer than 4 more than 4
Give one reason for your answer.
$\qquad$
$\qquad$
$\qquad$
(c) Electromagnet $\mathbf{A}$ is changed to have only 10 turns of wire wrapped around the nail.

Suggest the maximum number of paper clips that could be hung in a line from the end of this electromagnet.

Maximum number of paper clips $=$ $\qquad$

Q8.
(a) Name a material that could be used to make the outside case of the plug.
$\qquad$
Give a reason for your choice.
$\qquad$
$\qquad$
(b) To gain full marks in this question you should write your ideas in good English. Put them into a sensible order and use the correct scientific words.

Some electrical circuits are protected by a circuit breaker. These switch the circuit off if a fault causes a larger than normal current to flow. The diagram shows one type of circuit breaker. A normal current ( 15 A ) is flowing.

Source: adapted from V. PRUDEN and K. HIRST, AQA GCSE Sceince
Reproduced by permission of Hodder and Soughton Educational Ltd
Explain what happens when a current larger than 15A flows. The answer has been started for you.

When the current goes above 15 A , the electromagnet becomes stronger and
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Q9.
The diagram shows a switch that is operated by an electromagnet.

(i) What is this type of switch called?
(ii) The switch is used in a car starter motor circuit.

Explain how turning the ignition key makes a current flow in the starter motor. The explanation has been started for you.

When the ignition key is turned $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(Total 4 marks)

Q10.
The diagram below shows a door lock which can be opened from a flat inside a building.

(a) Explain how the door is unlocked when the switch is closed.
$\qquad$
$\qquad$
$\qquad$
(b) State two changes which would increase the strength of the electromagnet.

1. $\qquad$
2. $\qquad$
(c) Why is the spring needed in the lock?
$\qquad$
$\qquad$
(d) The connections to the coil were accidentally reversed. Would the lock still work?
$\qquad$
Explain your answer.
$\qquad$
$\qquad$

## Q11.

A fault in an electrical circuit can cause too great a current to flow.
Some circuits are switched off by a circuit breaker.

One type of circuit breaker is shown above. A normal current is flowing.
Explain, in full detail, what happens when a current which is bigger than normal flows.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(Total 4 marks)

Q12.
Circuit breakers help to make the electricity supply in homes safer.
A circuit breaker is an automatic safety switch. It cuts off the current if it gets too big.

Describe, in as much detail as you can, how this circuit breaker works.
To gain full marks in this question you should write your ideas in good English. Put them into a sensible order and use the correct scientific words.
